Data Source Documentation

Indicator	Fruit and vegetable consumption, adults 18+
Demographic	Wisconsin adults aged 18 and older.
Group	
Numerator	The number of adults in the Wisconsin Behavioral Risk Factor Survey
	(BRFS) sample who reported consuming five or more servings of fruits and
	vegetables per day.
Denominator	The total number of adults in the Wisconsin BRFS sample.
Details about	In the tables, the 95% confidence interval (the "+/-" column) indicates the
Data Item	range in which 95 of 100 identical surveys would estimate the percent of
	adults who consume five or more servings of fruits and vegetables per day.
	Add the confidence interval to the estimated percent to find the high boundary
	and subtract it to find the low boundary. Smaller numbers of cases in the denominator produce larger confidence intervals. Results shown in the tables
	are weighted to represent the overall population of adults in Wisconsin.
	and the Control of th
	The BRFS fruit and vegetable servings index, which is the basis for this
	measure, is calculated by the U.S. Centers for Disease Control and Prevention
	(CDC) from a series of individual questions about the number of servings of
	fruit, fruit juice, green salad, potatoes and carrots consumed per day, week,
	month or year. Values across the component questions are standardized to
	servings-per-day and summed. The results are categorized as "less than one (serving) per day or never," "one to less than three per day," "three to less
	than five per day," five or more per day," and "don't know, refused or
	missing."
Other Data	The Behavioral Risk Factor Survey (BRFS) is a sample survey conducted by
Information	the Bureau of Health Information and Policy (BHIP) in conjunction with the
	CDC. The annual number of cases is currently approximately 4,000 and has
	ranged from approximately 2,700 to 3,500 in recent years. Weighted BRFS
	data are considered representative of the Wisconsin adult population living in
	households with telephones. The CDC calculates the weights using Wisconsin
	population data and provides them to BHIP.
	Tables by race and ethnicity show "rolling averages" using combined years of
	data to yield a minimum of 100 cases per group.
Data Source	Wisconsin Behavioral Risk Factor Survey, Bureau of Health Information and
	Policy, Division of Public Health, Wisconsin Department of Health and
	Family Services.
	The BRFS is an ongoing probability survey conducted by telephone and
	carried out in conjunction with the CDC. Each survey year begins on January
	1 and ends on December 31.

Additional	The CDC Web site provides substantial information about the BRFS at both
Information	the national and state levels, including prevalence and trend
	data and historical question information. Information about the Wisconsin
	BRFS is also available at http://dhfs.wisconsin.gov/stats/healthsurveys.htm .
